Timber values are based on results of the 2009 Timber Products Output (TPO) Survey. "Acres of Forestland" and "Percent Forest" fields are based on 2009 estimates from the Forest Inventory and Analysis (FIA) program. Both programs are jointly administered by the USDA Forest Service - Southern Research Station and the South Carolina Forestry Commission. TPO and FIA numbers are designed to be interpreted at the state level.

## SOUTH CAROLINA FAST FACTS

- The number of forest products mills in South Carolina increased by two in 2009 to 77 mills. Five sawmills, two veneer mills, and a post mill permanently closed. However, the state gained ten new other mills such as mulch and shavings mills.
- Pulpwood is our leading forest product by volume harvested and it is also South Carolina's most valuable forest product (\$345 million for pulpwood vs. \$230 million for sawtimber).
- Roundwood harvested from South Carolina's forests declined 7.9% from 2007 to 2009. The downturn in housing construction resulted in a 34.3% decline in sawtimber production. However, pulpwood saw an 11.4% increase and the "other industrial roundwood" category (ex. poles, posts, & fuelwood) saw a 163% increase.
- South Carolina exports over \$1.3 billion in forest products annually.
- Timber volumes and growth are at record levels, and continue to increase, offering significant opportunities for expanded mill production.

## Production of Primary Timber Products in South Carolina
